

Phish or Legit?: Deliverable 2

Creators:
Jack McGowan, Ryan Shapiro, Martina
Price, Mateo Curci

Deliverable 2 Task Breakdowns

Mateo

In charge of navigating from office to desktop and back to office.

Ryan

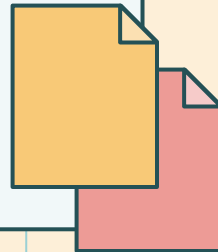

Combined all scenes into one Github/godot project. Worked on some interactions between scenes.

Martina

Created the system integrity bar, UI elements, and created foundation for phone system.

Jack

Implemented buttons into the item shop/desktop and changed fonts of item descriptions and desktop application names to 8-bit font

Containerization

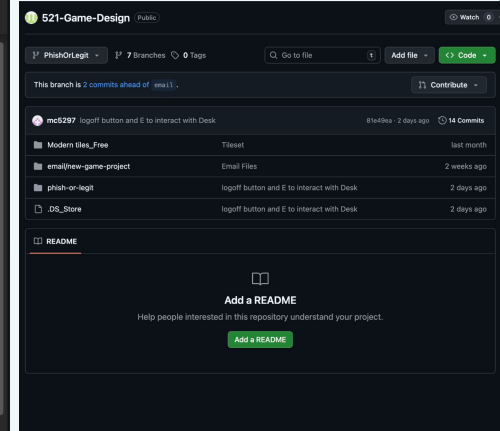

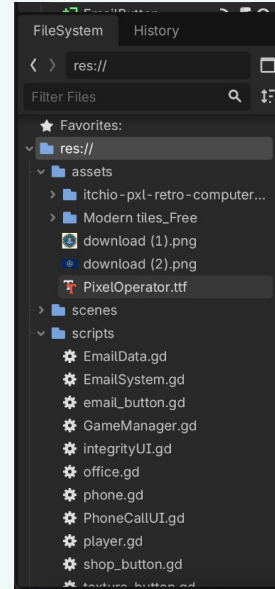

Putting all of our work together was a bit of a challenge, but after the initial effort, it becomes a lot cleaner and easier to work on in the future

Challenges

- GitHub Experience
- Art Styles, Design Choices
- Directory Tweaking

Benefits

- Have a working piece of software
- Anyone can work on any scene at a time
- Much more organized with all assets/scripts in one place

Interaction

\$50	Buy	
\$150	Buy	
\$100	Buy

\$75	Buy	Play

Hyper-Link Analyzer: A tool that automatically highlights mismatched URLs in red for 30 seconds

AI Firewall: A one-time shield that prevents the health bar from dropping in a phishing email is opened

Encrypted Storage: Increase the maximum health bar, allowing players to withstand more data breaches

Grant: If the player consumes this power, a streak will start, for each attack the player gets right in a row the more bonus money they will receive with each increasing correct answer

Spam Filter: Passively highlights common phishing keywords (Urgent, Account suspended) in a distinct color making them easier to spot at a glance

Encrypted Back-up (Extra Life): Once per playthrough if the players health hits 0 they can "restore from backup" with 25 or 50% of their health to avoid game over

Sandboxed Environment: Reduces the damage taken from successful data breaches by 25% by isolating the virus from the main server

Navigation

Script for logging on Desktop

```
1  extends Area2D
2
3  var player_in_range = false
4
5  func _process(delta):
6      if player_in_range and Input.is_action_just_pressed("inter
7          get_tree().change_scene_to_file("res://scenes/desktop.
8
9  func _on_body_entered(body):
